Transportation Research

an international journal

Editor-in-Chief

FRANK A. HAIGHT

The Pennsylvania Transportation Institute, Research Building B., University Park, Pennsylvania 16802, U.S.A.

Associate Editors

ALAN G. WILSON

Department of Geography, University of Leeds, Leeds LS2 9JT, England

GEORGE H. WEISS

National Institutes of Health, Bethesda, Maryland 20014, U.S.A.

EDWARD K. MORLOK

Department of Civil and Urban Engineering, University of Pennsylvania, Philadelphia, Pennsylvania 19174, U.S.A.

ADIB KANAFANI

Institute of Transportation Studies, University of California, Berkeley, California 94720, U.S.A.

Bibliographic Section Editor: RICHA[illegible] DE NEUFVILLE

Editorial Advisory Board

LEONID L. AFANASYEV, Moscow, U.S.S.R.
W. BRUCE ALLEN, Philadelphia, Pennsylvania, U.S.A.
RICHARD E. ALLSOP, London, England

Annual Subscription Rates (1979)

For libraries, university departments, government laboratories, industrial and other multiple-reader institutions US $96.00 per annum (including postage and insurance).

All subscription enquiries should be addressed to: The Subscription Fulfillment Manager, Pergamon Press Ltd., Headington Hill Hall, Oxford OX3 0BW, England.

SPECIALLY REDUCED RATES TO INDIVIDUALS
In the interests of maximizing the dissemination of the research results published in this important international journal we have established a two-tier price structure. Any individual whose institution takes out a library subscription may purchase a second or additional subscription for personal use at the much reduced rate of US $30.00.
Payments must be made in advance.

Copyright © 1978 Pergamon Press Ltd.

It is a condition of publication that manuscripts submitted to this journal have not been published and will not be simultaneously submitted or published elsewhere. By submitting a manuscript, the authors agree that the copyright for their article is transferred to the publisher if and when the article is accepted for publication. The copyright covers the exclusive rights to reproduce and distribute the article, including reprints, photographic reproductions, microform or any other reproductions of similar nature and translations. No part of this publication may be reproduced, stored in a retrieval system or transmitted in any form or by any means, electronic, electrostatic, magnetic tape, mechanical, photocopying, recording or otherwise, without permission in writing from the copyright holder.

U.S. COPYRIGHT LAW APPLICABLE TO USERS IN THE U.S.A.

The Article Fee Code on the first page of an article in this journal indicates the copyright owner's consent that in the U.S.A. copies may be made for personal or internal use provided the stated fee for copying beyond that permitted by Section 107 or 108 of the United States Copyright Law is paid. The appropriate remittance should be forwarded with a copy of the first page of the article to the Copyright Clearance Centre Inc., PO Box 765, Schenectady, NY 12301, U.S.A. If a code does not appear copies of the article may be made without charge, provided permission is obtained from the publisher. The copyright owner's consent does not extend to copying for general distribution, for promotion, for creating new works or for resale. Specific written permission must be obtained from the publisher for such copying. In case of doubt please contact your nearest Pergamon office.

Published bi-monthly.

No part of this publication may be reproduced, stored in a retrieval system or transmitted in any form or by any means: electronic, electrostatic, magnetic tape, mechanical, photocopying, recording or otherwise, without permission in writing from the publishers.

Microform Subscriptions and Back Issues

Back issues of all previously published volumes are available in the regular editions and on microfilm and microfiche. Current subscriptions are available on microfiche simultaneously with the paper edition and on microfilm on completion of the annual index at the end of the subscription year.

Vol. 197

LIST OF CONTENTS

Vol. 12
1978

NUMBER 1

Peter B. Everett, Brian C. Deslauriers, Theodore J. Newsom and Victoria B. Anderson: The differential effect of two free ride dissemination procedures on bus ridership 1
Dirck Van Vliet: Improved shortest path algorithms for transport networks 7
Feng-Bor Lin: A simulation analysis of pedestrian actuated traffic signal control system 21
Joel Horowitz and Robert Emslie: Comparison of measured and forecast traffic volumes on urban interstate highways 29
E. Alberti and G. Belli: Contributions to the Boltzmann-like approach for traffic flow—a model for concentration dependent driving programs 33
Yosef Sheffi and Carlos F. Daganzo: Another "paradox" of traffic flow 43
David Branston and Henk van Zuylen: The estimation of saturation flow, effective green time and passenger car equivalents at traffic signals by multiple linear regression 47
M. R. Wigan: The complementary roles of regulatory and fiscal methods of traffic restraint 55
Bibliographic Section 65

NUMBER 2

Randall J. Pozdena and Leonard Merewitz: Estimating cost functions for rail rapid transit properties . 73
P. Someshwar Rao: The impact of structural and compositional changes on the Canadian railway industry: 1958–73 79
Olav H. Jensen: The interaction between public transportation and other social activities: a systems approach 83
Martin Williams: Factors affecting model choice decisions in urban travel. Some further evidence . . 91
Craig A. Murawski and David B. Boyce: Variation in urban work trip length by mode, location and worker characteristics 97
Dennis E. Blumenfeld and George H. Weiss: Curve fitting the probability distribution of acoustic noise from freely flowing traffic 111
Guy L. Curry, Arthur Da Vany and Richard M. Feldman: A queueing model of airport passenger departures by taxi: competition with a public transportation mode 115
C. J. Macleod and A. J. Al-Khalili: Modelling of urban traffic networks 121
K. W. Ogden: The distribution of truck trips and commodity flow in urban areas: a gravity model analysis 131
Bibliographic Section 139

NUMBER 3

Announcement 145
J. H. Kent, G. H. Allen and G. Rule: A driving cycle for Sydney 147
Donald N. Dewees: Simulations of traffic congestion in Toronto 153
Leonard Evans and Robert Herman: Urban fuel economy: an alternate interpretation of recent computer simulation calculations 163
Kenneth Train: A validation test of a disaggregate mode choice model 167
Hoyt G. Wilson: On the applicability of queueing theory to lock capacity analysis 175
J. M. Malone, II and F. DiCesare: Calibration of gravity models 181
Richard Church and Charles ReVelle: Modelling an oversaturated intersection 185
Dimitrios S. Dendrinos: Operating speeds and volume to capacity ratios: the observed relationship and the fold catastrophe 191
Marc Gaudry: Seemingly unrelated static and dynamic urban travel demands 195
Bibliographic Section 213

NUMBER 4

Announcement 229
Tschangho J. Kim: Effects of subways on urban form and structure 231
Michael Florian and Sang Nguyen: A combined trip distribution modal split and trip assignment model 241
Elizabeth Cousins: A mathematical analysis of a park-and-ride scheme 247
Avishai Polus: Modeling and measurements of bus service reliability 253
Marc J. I. Gaudry and Michael J. Wills: Estimating the functional form of travel demand models . . 257
S. Erlander and N. F. Stewart: Interactivity, accessibility and cost in trip distribution 291
Bibliographic Section 295

NUMBER 5

Announcement 303
Moshe Friedman: Combinatorial problems in an adaptive public transportation network 305
Åke Svensson: An equilibrium equation for road traffic 309
Stephen G. Vahovich: Income and cost impact on general aviation hours flown by individual owners . 315
Ashish Sen, Siim Sööt and Efi Pagitsas: The logit modal split model: some theoretical considerations . 321
Carlos F. Daganzo: An approximate analytic model of many-to-many demand responsive transportation systems 325
Sven Erlander: A note on balancing procedures for trip distribution estimation 335
T. Y. El-Reedy and R. Ashworth: The effect of bus detection on the performance of a traffic signal controlled intersection 337
S. C. Wirasinghe: Determination of traffic delays from shock-wave analysis 343
Kenneth Train and Daniel McFadden: The goods/leisure tradeoff and disaggregate work trip mode choice models 349
Heinz Hautzinger: Travel demand elasticity with respect to socio-economic variables: the multinomial logit case 355
Hans-Jürgen Büttler and John H. Shortreed: Investment planning of a road link 357
Bibliographic Section 367

NUMBER 6

Announcement 375
Peter Gilmour: Path analysis: its use in transportation research 377
Alan J. Horowitz: The subjective value of the time spent in travel 385
Dipankar Ghosh and C. H. Knapp: Estimation of traffic variables using a linear model of traffic flow . 395
D. E. Pitfield: Sub-optimality in freight distribution 403
F. M. Turčinhodžič: Traffic flow control at an intersection by means of signal setting duration. State-space analysis 411
M. J. Smith: In a road network, increasing delay locally can reduce delay globally 419
Dennis E. Blumenfeld and George H. Weiss: Statistics of delay for a driver population with step and distributed gap acceptance functions 423
Bibliographic Section 431

Aims and Scope of the Journal

Transportation Research is designed to meet the need for rapid publication for the most significant scientific and technical results which relate to the design and operation of transportation systems. The journal covers all modes, and especially welcomes papers which compare or contrast modes, or which analyze factors affecting modal choice. Economic factors such as pricing, cost effectiveness and criteria for modal comparison are included, as are more general questions of policy and planning Papers which contribute seriously to evaluation of the scope for technological innovation within a social or political framework are suitable for the journal.

The following are examples of material within the domain of *Transportation Research:*

Transportation engineering, traffic engineering, transport economics, urban and regional planning, control and scheduling, optimization methods in planning and operations, system planning and design, travel demand models, prediction of network usage and flows, traffic control and traffic flow theory, noise, pollution and other environmental impacts.

The following are excluded from the journal: accident and safety analysis, anecdotal accounts (unless they contribute to methodology), design and manufacture of units (cars, aircraft, wagons), engineering of ways (rail, bridge, road), mathematical exercises (including development of algorithms) with no clearly defined substantial application in transportation.

The Bibliographic Section is a regular feature of *Transportation Research*, carrying full-length and shorter reviews, brief notices of recent publications, abstracts of doctoral dissertations, and special features on particular publication series.

Manuscripts on transportation safety can be submitted to the Editor-in-Chief for consideration by the companion journal *Accident Analysis and Prevention.*

Allied Journals

Other Pergamon Journals which are of interest to readers of *Transportation Research:*

Accident Analysis and Prevention
Atmospheric Environment
Engineering Science
Information Processing and Management
Operational Research Quarterly
Regional Studies
Socio-Economic Planning Sciences

Each journal has an individual Information and Index Leaflet giving full details. Write now for any of these leaflets which interests you.

Vol. 12
1978

Information for Contributors

General

Manuscripts should be submitted in triplicate to the Editor-in-Chief or to one of the Associate Editors, depending on the subject:

George H. Weiss: Mathematical, statistical or experimental aspects of traffic flow and traffic control

Alan G. Wilson: Trip distribution, modal choice and related travel demand models

Edward K. Morlok: Transport network theory and model development, testing and evaluation.

Adib Kanafani: The air modes; demand analysis and forecasting.

Frank A. Haight: All subjects.

Only papers not previously published will be accepted, and authors must agree not to publish elsewhere a paper submitted to and accepted by the Journal.

English is the language of the Journal.

Reprints can be purchased on a reprint order form which will accompany proofs.

The original manuscript and diagrams will be discarded 1 month after publication unless the Publisher is requested to return original material to the author.

Both figures and tables will be photo-reproduced, and authors are required to furnish camera-ready artwork or glossy prints. Photocopies or carbon copies are not adequate as they will not reproduce clearly. In case of difficulty please consult the Photoreprographic Unit of your institution.

Preparation of tables

In the interests of economy and in order to avoid the introduction of errors, tables will be reproduced by photo-offset means directly from the author's typed manuscript. This will materially reduce costs of publication and reduce setting delays. Tables should be submitted in a form suitable for direct reproduction. The guidelines detailed below should be followed: (1) Page size should be 8.5 × 11 in. (or 21 × 30 cm). (2) Large or long tables should be typed on continuing sheets. (3) Table headings should be typed on separate sheets but identifying numbers should be placed on the upper right-hand corner of each sheet of tabular material. (4) Original typed tables are required. It will be the author's responsibility to prepare his tables in accordance with this procedure as no facilities exist at the Editorial Office for retyping. In case of difficulty please consult the Photoreprographic Unit of your institution.

Style of Manuscript

Manuscripts should be typed double-spaced on one side of the page only with wide margins, and submitted in triplicate. A short abstract should accompany the manuscript on a separate sheet. Both the paper itself and the abstract should be headed by the name or names of the author and their affiliation. In the case of co-authors, it should be clearly indicated which author is to receive correspondence and proofs for correction.

Mathematical expressions should be carefully inserted, keeping in mind typographical difficulty. Authors should indicate in the margin the names of Greek letters or other unusual symbols when they first occur and clarify any other possible sources of ambiguity: for example, between "zero" and the letter "o", the numeral "one" and the letter "l", capital and small letters, etc.

Tables should be submitted on separate sheets of paper, should be numbered consecutively, and should have informative titles. The position of tables in the manuscript should be indicated. All figures and illustrations should be professionally drawn about twice the final size required. Their position in the manuscript should be indicated, and figure numbers together with informative titles should be listed on a separate sheet of paper.

Authors are seriously recommended to use SI (metric) units in their manuscripts, with optional English equivalents in parentheses. If there is a persuasive reason for avoiding SI units, this should be explained in the cover letter submitting the manuscript.

The Harvard System of references is used: in the body of the text a paper is referred to by the author's surname with the year of publication in parentheses and at the end of the paper complete references are given alphabetically by authors' surnames with journals abbreviated according to the *World List of Scientific Periodicals* (4th ed.).
